adapting designs to different screen sizes

Designing adaptive versions of the site
responsiveness

Ability to identify target audience, conduct user research, competitor analysis

Prof. Attributes

Understanding of trends and a high level of aesthetics

High level of self-organization and responsibility

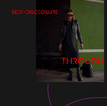
Strong teamwork skills

Open-minded thinking and clear perspective.

Landing page

Task!

Develop a landing page for photographer Dmytro Kotsyuba, showcasing his portfolio and providing information about photography services. The goal is to create an engaging and aesthetically pleasing platform that effectively showcases photographer's work and attracts potential clients. The landing page should serve as a gateway for various services and focus on challenges related to commercial and client engagement.



During the design development, a comparative analysis was conducted, and a prototype was created, with each stage being approved by the client. The photographer's style was taken into consideration, ensuring the design reflected his unique aesthetic. In the wireframe development phase, we focused on creating a user-friendly interface with seamless navigation. The layout and structure were designed to enhance the overall user experience, ensuring easy access to the photographer's work and services. The site's adaptive versions for desktop, mobile, and tablet devices were meticulously crafted to maintain consistency across different devices. Through continuous collaboration with the client, we refined the design to ensure it not only met aesthetic standards but also produced a product that aligns with both the client's preferences and industry standards.

E-commerce

Task!

Create a website for a bicycle shop that effectively showcases its products and services. The website should provide a user-friendly experience, facilitating easy access to information and enhancing customer engagement. The goal is to create a visually appealing and intuitive interface that supports both the shop's marketing efforts and customer satisfaction.

When developing an e-commerce site, our project manager addressed the client's needs by conducting a comprehensive analysis to effectively select the right products and place orders without the help of consultants, improving the overall shopping experience.

Branding

Task!

Create a distinctive brand for the clothing store AKOKO, which stands out from other brands. The goal is to create a memorable and cohesive brand identity that resonates with the store's target audience. The brand should reflect the store's unique aesthetic and values, ensuring it stands out in the competitive market while maintaining consistency across all marketing materials and customer touchpoints.

In the field of branding, design and website development, our team has successfully taken on the challenge of creating a brand that resonated with the client's vision, aiming to develop an intuitive, user-friendly interface for the AKOKO brand. This project involved a deep dive into competitor analysis, close collaboration with the client, and meticulously crafting an attractive brand and a user-friendly website that effectively showcases the store's offerings.

Do you have any thoughts for your project?
